ABSTRACT ~~(FIGURE 4)~~ OF THE DISCLOSURE

_____ A compact moiré effect body scanner provides 3-D
images of a human body for use in making up suitable
5 garments. The scanner includes an elongate projection
module with a photographic grid that illuminates the
body. An elongate imaging module having a second
photographic grid lies alongside the projection module
and a digital camera is used to capture images of the
10 body. The scanner is typically about 400 mm long, 400
mm high, and 150 mm wide and can be used in normal room
light conditions.
